DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3,4,5,10-14 and 16-18, drawn to preventing a hanging connection when the mobile enters a power down mode, classified in class 455, subclass 574.
 - II. Claims 6-9,15 and 19, drawn to preventing a hanging connection when authentication of a mobile station fails, classified in class 380, subclass 247.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions because the specification does not disclose these inventions as being usable together and they have different modes of operation since one is used when a mobile is powered down and the other is used when the authentication of the mobile fails.
3. These inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification. In addition, the search required for Group I is not required for Group II and so the restriction for examination purposes as indicated is proper.
